BASIC BUSINESS REPORT (for the App)

---

1. Executive Summary

- **App Name:**
- **Tagline:** Add record by Speech, track effortlessly
- **Brief Description (App):** The app is a voice based shop record management solution that allows shopkeepers to record sales and purchase transactions using voice while automatically updating stock levels, providing sales and insights.
- **Problem Statement:** While digital ledgers offer advantages over physical ledgers yet there are still shortcomings as shop owners still find them complex.
- **Solution Overview:** The app provides a voice first unified entry system where shopkeepers can speak transactions naturally. The app converts spoken input into structured digital records, updates stock automatically, and generates reports without manual calculations.
- **Target Market/User Segment:** Small neighborhood shops (mom-and-pop shops)
- **Value Proposition:** Fast, effortless record keeping using voice that reduces manual effort, and calculation errors.

Business Essentials - Prof. Sach

- **Competitive Advantage:** Voice first design, minimal interface, offline data storage

2. Problem Identification

- **Describe the Core Problem:** Physical ledgers are fast but slow to manage. Records become cluttered, calculations are manual, and finding old entries is time consuming. Digital apps solve storage but introduce effort through typing and complex interfaces.

- **Who Faces This Problem?**

  Small shop owners managing daily sales, and supplier purchases without formal accounting support.

- **Market Gaps Identified:** No voice first solution, typing heavy workflows, inventory and records are not automatically linked

- **Why Existing Solutions Are Not Enough:** Existing apps still require manual typing and navigation, which is slower than writing during rush hours

- **Desk Research Insights:** Most micro retailers continue using physical ledgers despite smartphone adoption, indicating a workflow mismatch rather than resistance to technology.
- **Survey Findings:** A majority of physical ledger users reported manual efforts, calculation mistakes, inventory mismatch and difficulty finding past records.

---

3. The App As A Solution

- **Overview of the App:** An app that enables voice based sales and purchase entry, automatically updating stock and providing sales and stock insights.

- **Primary Features at MVP stage:** Voice based unified entry, automatic stock updation & low stock alerts, sales and profit report.

- **Differentiators:** Voice as primary input method, automatic stock update and threshold reminders, offline data storage.

Business Essentials - Prof. Sachin Ghai

- **Unique Selling Point (USP):** Record sales by speaking, automatic stock updation

- **Technology Stack (Frontend, Backend, Database, APIs, etc.):**

  Frontend: SwiftUI
  Voice input: AVFoundation + Offline speech recognition
  Database: CoreData / SQLite
  Analytics: Swift Charts
  Notifications: UserNotifications

- **Future enhancements (Features and Functionalities):**
  Multi-language support
  QR Code input
  Custom Queries

---

4. Market Analysis

4.1 Industry Overview

- **App Category**

  Business productivity / Retail record management

- **Size of Market/Industry**
  India has over 13 million micro and small retail shops

- **Current Trends**
  Increasing smartphone usage
  Growing interest in digitization

- **Growth Forecast**
  Steady growth in small business and finance software due to MSME digitization initiatives

4.2 Target Market

- **Target Customer Segment**

  Micro Retail shops (mom and pop shops)

- **Demographics & Psychographics**

Business Essentials - Prof. Sachin Ghai

Owner operated, time constrained, practical decision makers who value speed and simplicity

- **Estimated Number of Potential Users (user base, TAM, etc)**

  Millions of small retail shop owners currently using physical or semi-digital record systems

4.3 Market Insights

- **Pain Points**

  Manual Calculations

  Record clutter

  Time consuming to find entries

  Inventory mismatch

- **Current Hacks**

  Multiple notebooks

  Mental calculations

  Mixing paper and apps

- **Competitors (Features, Strengths, Weaknesses)**

Competitor Apps	Features & Highlights	Strengths	Weaknesses
Khatabook	Credit/Debit records, Payment reminders	Simple ledger, Free basic version	Typing required, no voice input, limited automation
Vyapar	Billing, Inventory, GST support	Feature rich, suitable for larger businesses	Complex UI, steep learning curve for micro shops
OKCredit	Customer credit tracking, reminders	Credit Tracking	Focused mainly on credit, not full sales or inventory workflow
MyBillBook	Billing, Stock management, Reports	Structured invoicing, inventory support	Time consuming data entry, not optimized for speed

Business Essen

5. Revenue Streams AND Test/Launch Strategy

5.1 Revenue Streams (√ what applies)

- Freemium Model√
- Subscription Plan√
- In-App Purchases
- Transaction Fees
- Commission-Based Model
- Data Monetization
- B2B Partnerships
- Advertisements
- Any other (specify): Optional premium analytics features

5.2 Test/Launch Strategy

- Beta Testing Strategy (Target users and numbers for testing user experience):

  Test with 10 local shopkeepers to validate usability and speed

- User Feedback mechanism:

  In-person demonstration and feedback, observation

- Launch Plan:

  The app will be launched in phases, starting with a small group of local retail shopkeepers. Initial onboarding will be done through personal demonstrations and guided usage to observe real-world behavior. Feedback will be collected to improve usability before a wider rollout. Once stability and usability are confirmed, the app will be made available to a broader audience through app stores and referrals.

- Marketing & Branding Approach:

  On ground demos, simple explainer videos, and shopkeeper referrals

Phase	Timeline	Features / Capabilities	Tech/Resource Requirements
MVP	Jan/Feb	Voic entry, Stock auto updation & threshold reminders, report and analytics	SwiftUI, CoreData, AVFoundation
Beta Launch	Mar/Apr	UI Polish	User testing
Full Launch	May/Jun mid	UI Polish	App Store
Future Updates	Post Internship	Custom Queries, QR Input, Multi-language support	Iterative developement

Note: Teams members can brainstorm / discuss collectively and prepare the report; Submissions to be made individually by each student for the viva-voce.

Print this assignment and complete it manually. Paste the images/screenshots or print them directly on the appendix page.
